Why should you care about an open infrastructure for your project?

Karsten 'quaid' Wade, Red Hat, CentOS Eng Mgr

Definition of:

Open community
Infrastructure of participation

Goal:
Make everyone win

Why is an open infrastructure
a win for the free/open source project?

Why is an open infrastructure
a win for the individual contributor?

How and why create, grow, and maintain an open infrastructure?

Operate like a project – practice
the open source way.

Key free/open project values:

Merit
Default to open

How do you create
trust when
you may never meet
face-to-face?

Hint: no babies are at
risk and
mistakes won't get
you fired.

Divide your needs by how close to the metal you need to be …

Core-essential technology
Core-non-essential technology
Non-core technology

Segmentize:
Config mgmt v. sudo
Different hosts & services
Web UI admin

Start with the bare minimum you
can or want to afford, then
scale as you grow.

# Sponsors: finally something for them to do for the project.

Example: oVirt

|	
Core-essential	Gerrit, Git, Jenkins, Yum
Core-non-essential	Puppet, Foreman, (Mailman)
Non-essential	MediaWiki, (Mailman)
Other services consumed	GitHub, Identi.ca, Twitter, etc.

Example sample: Fedora

|	
Core-essential	Koji, pkgDB, Bodhi, Yum, SCM, testing, people pages ...
Core-non-essential	Bugzilla, MediaWiki, WordPress, Elections, Planet, MirrorManager ...
Non-essential	Hosting (sponsors), Mirrors
